

The terms “drought” and “stormwater management” have become commonplace in our vocabulary when referring to landscapes. Though we’ve experienced a relatively moist year in Maryland, this hasn’t been the case in recent years, and will probably not be the case in the future. The threat of drought looms larger with each growing season, and the days of using drinkable water in the landscape are probably numbered, as witnessed by other states and municipalities. With this in mind, as gardeners and environmentalists, we need to be strategic with our planting designs and stingy with our water use. Come to the Green Matters Symposium to learn how to create a water-wise landscape of your own.

Course number 64759

Fee: \$79 early registration by January 16;  
\$89 after January 16
